DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-7, 9-13, 15-23, 25 and 26 are rejected under 35 U.S.C. 102(e) as being anticipated by Crawford et al (US 2003/0002471).

Regarding claims 1, 2, 7, 9, 10, and 15-21, Crawford, as shown in figures 1, 16, 17, and 18A, teaches an OFDM communication system wherein the antenna is selected from a group of antennas based on the symbol error rate.

See paragraphs [0016] – [0019]; [0047] – [0049]; [0093]; and [0137].

Regarding claims 3-6, 11-13, 22, and 23, Crawford further teaches averaging the symbol error rate. See paragraphs [0095]; [0105]; [0106]; [0119]; [0120]; and [0171].

Regarding claims 25, Crawford further teaches the system is part of wireless access point. See paragraph [0041].

Regarding claims 26, Crawford further teaches the system can be used in wireless local area network which inherently including NIC. See paragraph [0044].

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 8, 14 and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crawford et al (US 2003/0002471) in view of Liang et al (US 2004/0204105).

Crawford teaches all subject matter claimed except for using the system to support the CDMA environment. See section 2 above. However, CDMA is well known in the art of digital communications. For example see paragraph [0004] of Liang that teaches variety of possible communications including CDMA.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the communication system of Crawford et

al to support the CDMA communications since it is just an alternation way of wirelessly communicating information.
